In my jsp i want to use the value. Servlet: public class servlet extends HttpServlet { public void doGet(HttpServletRequest request, HttpServletResponse response) throws IOException { System.out.println("hi"); } } JSP page: Hello World! But i can't get the value. A: The code is absolutely working. I think that you don't set the name of your parameter message in your html page. Try to write it like this : Q: Is there a benefit to using NIO for small files over traditional file IO? I am working on a web application that involves reading large files. If the file size is smaller than ~500 KB, I am using traditional file IO. If it's larger than 500 KB, I use NIO to read the file. My question is, why would I want to use NIO to perform reads on files that are smaller than 500 KB? A: If you read files which are larger than 500 KB, then you will, most likely, have to load them all into memory. If you read smaller files, you will not load all of them into memory. Since memory is expensive, the smaller files will consume a lesser amount of memory. This is the reason why you should use NIO over traditional
